Composed of a rectangular pizza shovel, round pizza shovel, oven brush, ash removal shovel, and oven scraper.

TECHNOLOGY

We designed a special ash box with forced air circulation for its barbecues. With this new technology it improves combustion and also makes cleaning easier when the fire is out.

MARMOTECH

An innovative material made from appropriately mixed marble granulates with a high heat resistance. Marmotech is resistant to bad weather conditions and ensures a long service life. This material does not require final painting and it's available in natural, polished, and brushed finishes.

WORKTOPS

We offer a range of barbecues in various finishes for the worktops.

STRUCTURE

All grills in our collection have a solid, sturdy structure that is resistant to the elements and ensures long life. The structure is made of a cement mix faced with washable white plastic stipple (in the finished version).

CONCRETE MIXTURE

Mixture of high quality concrete inserts and refractory materials to protect with a 2"-3" lay of outdoor washable plastic paint.

MASS COLORING

This material significantly simplifies maintenance. Once installed, the grill is already finished and does not require painting.
